Abstract (en)

[origin: EP1752593A2] The method involves making bricks (1) with essentially cubic bodies (2) and at least two cavities (8) at least partly for accommodating insulating material. It involves making the bricks from a starting material by forming the cavities. Molded bodies (15) of insulating material inserted into at least one, especially several and preferably all cavities have a greater volume than the cavities so they are held under friction. An independent claim is also included for a masonry block, especially a brick with cavities.
