Abstract (en)

[origin: EP1753096A2] The device has rigid rails (1) presenting curved shaped lateral connection surfaces (4) symmetrical with respect to a longitudinal axis of the rails. A set of conductive connection parts (3) presents an internal section corresponding to the lateral connection surfaces and includes an inner lateral stop unit (5) and connection elements (3', 3'') each presenting curved flanges and connected between them by a screw (6). An internal surface of curved sides of the connection parts is applied against an external surface of the lateral connection surfaces.
