Abstract (en)  
[origin: WO2005122816A1] The invention relates to a film comprising individual anchored filaments. More specifically, the invention relates to the female part of a hook-and-loop self-adhering support, comprising a plastic film and indentpendent filaments which are fixed to one of the faces of the film. The invention is characterised in that part of the length of each filament is anchored to the plastic film, while the remainder thereof is disposed at a distance from the film, such as to form loops. According to the invention, the film is made from a non-elastic and non-heat-shrinkable material and the filaments have a count of less than 10, preferably less than or equal to 7.7, for example between 2 and 5 decitex.
