Abstract (en)
[origin: WO2005120312A1] The invention provides a thermally-actuated pump for use in a hot drink maker. The pump comprises a thermal actuator (20) and a piston (42). The piston is disposed within a cylinder (50) and is coupled to the thermal actuator such that, in use, heat supplied to the thermal actuator causes this actuator to drive the piston further into the cylinder and thus create an increased pressure in the cylinder.
