Abstract (en)
[origin: WO2005115515A1] A dose-dispensing device (200) for an administration appliance, in particular an injection appliance for administering doses of a substance, comprises: (a) a dose-adjusting device (10, 24, 26) for adjusting a dose of substance to be administered by means of a first rotary motion; and (b) a graduated scale (60) which can be rotated with a second rotary motion for reading the adjusted dose. The device is characterised in that (c) a gearing (10c, 24, 42, 210a, 210b, 52) couples the first rotary motion to the second rotary motion in such a way that the second rotary motion is slower than the first.
