Abstract (en)
[origin: WO2005087402A2] Winding-machine for rolled or drawn wire/rod (F) with device to form a wire/rod coil (R) in a winding-machine with one or more winding reels (1) placed downstream of a wire/rod working installation, provided with wire/rod-drawing means (2-3) and5 thereafter: - an oscillating wire/rod-guide (4) with wire/rod-guide handling means (6) to lead the end of the wire/rod-guide reel side to follow the winding so that the wire/rod from the said advancing means (2-3) is wound up in the reel (1) with first translation means (65) to move the reel side end (1) of the exit opening said wire/rod-guide (4) parallel to the reel/mandrel axis (1) and second translation means (8-6) to move said exit opening of said wire/rod-guide (4) in withdrawal/approach perpendicularly to the axis of said reel/mandrel (1) in order to follow the increase of diameter of the coil (R) during winding-up with improved wire/rod containment system at said exit opening (7).
