Abstract (en)

[origin: WO2005121453A1] The invention relates to an anchoring assembly for anchoring e.g. a concreted rail track (34) to a concrete support layer (28). According to the invention, the rail track (34) is anchored using a fixed anchor and one or more displaceable anchors, in order to compensate for varying degrees of expansion. The displaceable anchor has an anchor bar (10), which is anchored into a hole (30) in the anchorage (28) using mortar. The anchor bar (10) comprises a deformable sheath (36), which permits the displacement of the rail track (34) in relation to the anchorage (28).
