Abstract (en)

[origin: WO2006021244A1] The invention relates to an excavating bucket (100, 150) comprising a main plate and a connector (102). The connector is arranged to connect the excavating bucket to an excavator (10). The excavating bucket (100, 150) is arranged for performing a digging movement, the digging movement comprising a rotational movement about a rotational axis (R). The main plate is formed by at least a first and a second portion (111, 112) having a first and second front edge (121, 122), where a first distance between the first edge (121) to the rotational axis (R) substantially differs from a second distance of the second edge (122) to the rotational axis (R).
