Abstract (en)

[origin: WO2006005818A1] The invention concerns a method for software updating of a system (1) comprising an operator's network (2) and local area networks (RL1, RL2) including respectively terminals (T11, T12, T13, T21, T22) equipped with a user interface, and a gateway device (P1, P2) connected to the operator's network and setting up, upon request from the user of a terminal, an access channel to the services, the gateway device not being provided with user interface for accessing the services and comprising a set of software applications (A1, A2), said method comprising a preliminary step during which an event is triggered to transmit, over a communication channel set up in response to a user request, a message concerning said updating and to communicate the message to the user via the terminal and a step of downloading towards the gateway device an updating of the set of software applications.
