Abstract (en)
[origin: EP1754603A1] The machine has several printing and drying stations that are combined to an integrated printing and drying station (25). The station (25) has a rotation screen printing unit (27) and a radiation dryer (43) that lie on opposite sides of a spindle path (17). The printing unit and the dryer subtend in a radial direction of a spindle plate (4), so that the printing unit and the dryer simultaneously act on a hollow body (5) placed on a retaining spindle (12) that is provided in the integrated printing and drying station (25).
