Abstract (en)

The device (100) has upper (101) and lower (102) textile layers whose outer sides form paper and machine sides respectively and binding fibers (B1-B16) connecting the layers. The layers are formed by the binding fibers interwoven with longitudinal fibers, whereby the weave of the lower layer weave pattern repeats. Each lower longitudinal fiber of a lower repeat pattern is held on the outside of the lower layer by at least four binding fibers, each of which crosses each lower longitudinal fiber on the outside of the lower layer.
