Abstract (en)

[origin: DE102005039509B3] The hinge has two adapter bodies (4, 4'), which are positioned in recesses (17, 17') in a frame and in a door case (2). Two hinge handles are swivelingly connected around a vertical connecting axle (7). The first hinge handle (5) at an end is stored and can turn around a first vertical axis of rotation (18) in one adapter body and at the other end can turn around a second vertical axis of rotation (19) in the other adapter body. The second hinge handle (6) has at both ends a guidance recess (20, 20') so that adapter body is adjustable and moveably stored. The form of the guidance recesses allows the movement of frame.
