Abstract (en)

The invention regards a method for adapting a sound guiding tube (1) to the ear of a hearing aid user, whereby the tube (1) at a proximal end thereof (2) is connectable to a sound producing device (4) like a hearing aid, and whereby a support member (5) is mounted slidably along the tube (1) at a distal part (3) thereof and where the length of the tube system from the sound producing device to the support member is adjusted by sliding the tube (1) with respect to the support member (5) to allow a the support member and a distal part of the tube to extend into the ear canal when the proximal end of the tube is connected to a sound producing device. Further the invention concerns a tube, a support member and a sound guiding system.
