Abstract (en)
[origin: WO2005105429A1] Moisture permeable textile constructions (10) are disclosed. The construction (10) comprises a textile substrate (14); the face side of the construction (10) comprises a low energy surface (12); the reverse side of the construction may carry a primer (16) and an adhesive (18) that allows the construction to be securely attached to a support surface, yet may be readily removable without residue or damage to the support surface. The low energy surface (12) may be printed, patterned, or otherwise treated to provide decorative and/or functional characteristics, as desired, depending on the intended use of the construction. Various chemical additives such as stain release agents, biocides, etc. may be incorporated into the construction.
