Abstract (en)

[origin: WO2006090425A2] Device (10) to constrain a boom (19, 20) to a mast (15) of a sailboard. The mast (15) comprises an outer surface in correspondence with which two ends (19a, 20a) of the boom (19, 20) are disposed. The device (10) comprises constraining elements (23) able to couple each of the ends (19a, 20a) of the boom (19, 20) to the outer surface of the mast (15), so that an axis (X) joining the two ends (19a, 20a) also intersects the mast (15).
