Abstract (en)

[origin: WO2005123893A1] The invention relates to a method for producing surfactant granules with a bulk weight of between 300 and 800 g/l, by the neutralisation of anionic surfactant acids and optionally additional acidic components using solid neutralising agents. According to said method, the anionic surfactant acid(s) and the solid neutralising agent(s) are agglomerated in a gravity mixer and are optionally subjected to subsequent treatment. Said anionic surfactant acid has a water content of between 5 and 24 wt. %.
