Abstract (en)  
[origin: WO2005121704A1] The invention relates to a device for positioning markings, said device comprising a first appliance unit (10), means (14) for arranging the first appliance unit (10) in a pre-determinable first position (18) of a reference surface (16), and optical signal means (20,22,50,54,60,62,64,66) for producing directional information. According to the invention, the device is provided with a second appliance unit (12,13) that can be positioned in relation to the first appliance unit (10) and comprises means (20,22,28,50,54,56,58,60,62,64,66) for determining the distance between the second appliance unit (12,13) and the first appliance unit (10) in the direction pre-determined by the first appliance unit.
