Abstract (en)

[origin: WO2006134035A1] The invention relates to an assembly for processing chemical substances in the laboratory domain, said assembly comprising sub-assemblies for carrying out basic chemical operations. The sub-assemblies can be combined in a modular manner for the processing of chemical substances and their grid spacing is tailored to one another. According to the invention, the sub-assemblies are configured as stackable, self-supporting boxes.
