Abstract (en)  
[origin: WO2005124819A1] The invention relates to a media injector for transporting a particularly fluid medium into a processing chamber, preferably consisting of a supply device and at least one gap acting as a transport opening for the medium, wherein said gap comprises at least two gap defining surfaces with a gap arranged therebetween. According to the invention, at least one gap defining surface is defined by at least one part of at least one front surface of a first tubular element.
