Abstract (en)
[origin: WO2006008374A1] The inventive system for automatically connecting the main electric circuit of a vehicle to the auxiliary circuit of a subset like a seat comprises an auxiliary contact carrier (5) fixed to said subset and a main contact carrier (4) which is movable along a structural element. Said main contact carrier (4) is oscillatingly mounted on the support (1) of a structural element in such a way that it is supported by a spring (6) and is provided with protruding members for guiding the auxiliary contact carrier (5) during a connecting movement.
