Abstract (en)

The method involves selecting a user silhouette displayed on a screen, and defining and saving a graphical representation of an individual action, in a file, that is performed on the silhouette at a given position such as side position, back position or profile, of a patient, where the action is represented by a water jet trajectory marked on the silhouette. Defined actions are selected, and a treatment, produced by selecting the defined actions, is defined and saved in the file. The saved files are printed, stored and/or communicated. Independent claims are also included for the following: (1) a computer program comprising a code for implementing a method (2) a computer system for controlling and managing a shower device.
