Abstract (en)

[origin: EP1757522A1] The closing process involves the use of a clip device (1) with a drive (2, 3) and control (4), which also has a measuring device (9) on the holder (7, 17) of one of the clip closing tools. This measures the force acting between the first and second tools. The result of this measurement is then compared with a boundary value, and the control acts on the drive accordingly.
