Abstract (en)
[origin: EP1757536A1] The assembly has pressurized aerosol containers each having a valve with an actuating stem (11). A distribution device is displaced with respect to the container to actuate the valve and to discharge the product via a distribution opening. A blade (40) stops against a wall (34) transversal to a longitudinal axis (X) to prevent the device from displacing the stem along the axis. The blade allows the device to tilt the stem around an axis (Y) along a direction from rest position of the stem and prevents the device to tilt the stem around the axis (Y) in an opposite direction.
