Abstract (en)
[origin: EP1757725A1] This invention relates to the shirt finishing machine to press the washed shirts. The purpose of the present invention is to enable the clamp device to perform a clamp work in an easy manner and without damaging a cloth or a stitching part. With this arrangement, a product price can be made less expensive. This invention comprises a torso (2) for putting on a shirt (1), a pair of right and left supporting arms (4) arranged at both sides of the torso (2) and inclined at the side of the torso (2) to draw the sleeve of the shirt (1), and a clamp device (10) arranged at the upper part of the supporting arms (4) for holding and fixing the end segment of the sleeve of the shirt (1). The clamp device (10) is formed in such a way that it can be turned by 90° around the shaft (1) arranged in a direction crossing at a direction crossing at a right angle with a longitudinal direction of the supporting arms (4) and along an inclining direction of the supporting arms (4) and it can be changed over between its vertical orientation and lateral direction. In addition, the clamp device (10) is moved up or down along the longitudinal direction of the supporting arms (4) and its height can be freely adjusted.
