Abstract (en)
Mounting part comprises an elastically deformable clamping part (5) arranged between a sleeve rail (1) and a closing pin (3) to interact with the rail in one position of the connecting rod and hold the closing pin in its adjusted rotary position. Interaction of the clamping part remains in a further position of the connecting rod and the closing pin is held twisted against the force of the clamping part. Preferred Features: A longitudinal hole (4) arranged in the rail has a widened section (6) so that interaction of the clamping part remains in the region of the widened part.
