Abstract (en)

[origin: EP1757889A1] The sump has at lease one opening, and a sealing cap (25) that can be axially inserted into the opening. After the sealing cap has been inserted, the position of the cap is fixed in the axial direction. Preferably, the cap latches in the sump. After insertion, the cap is rotatable about an axis (99) which is parallel to the axial direction. Independent claims are included for a sealing cap, and a condenser.
