Abstract (en)

[origin: EP1758064A2] The system has a detecting unit (2) and a wireless actuator (3) arranged in a monitoring and alert reporting region. The unit and the actuator transmit a signal to a receiver provided in the wearer's body. The receiver receives the signal and transfers the signal as a mechanical stimulus to the wearer. The actuator and the detecting unit are switched in a row or as a branch line in different monitoring and alert reporting regions.
