Abstract (en)
The invention is directed to a lithium rechargeable battery (1) including a cathode (2) and an anode (3), wherein at least one of the both electrodes comprises an electrode collector and a layer of an electrode active material coated on the electrode collector; a non-aqueous electrolyte; and a separator (4) being arranged and being adapted for separating the cathode from the anode and being coated on the at least one layer of the electrode active material, the separator comprising a porous membrane, wherein the porous membrane comprises a ceramic material and a binder. The lithium rechargeable battery being characterized in that a peel strength of the electrode active material to the electrode collector is greater than a peel strength of the porous membrane to the electrode collector.
