Abstract (en)

[origin: WO2006019303A1] A device for changing between two different tips on a pole, comprising a rotatable member (1) having two end pieces in the form of a tip (2) with a spike for use on soft substratum and ice and a tip (3) having a soft pad for use on hard substratum respectively. The member (1) is fastened to an inclined plane on an end (4) of the pole, in such a manner that it may be rotated approximately about its middle point and retained in one of two optional rotational positions on the pole, in which the tip (2) with the spike and the tip (3) with the soft pad, respectively, are directed approximately in the longitudinal direction of the pole. On the end (4) of the pole may be provided a covering element (23, 24) for covering the spike on the pointed tip (2) when the spike is directed upwardly. The covering element (23, 24) may be hinged to the end (4) of the pole, in order to be pivoted in against the end (4) of the pole and be locked thereto.
