Abstract (en)
[origin: WO2005112032A1] A CD case (1) has a drawer (3) which slides into and out of a housing (2) having hinged top and bottom parts. A drawer handle (10) has a cover wall (11) covering a front opening in the housing, and exposing a large surface (15) for a label. A finger grip (12) is formed from an integral web of material extending forwardly, and terminating in a downward lip (13). A disc retainer (19) has four resilient tabs (40) for gripping without use of an overhang lip. Movement of a CD is guided by a guide (41) which centres the CD and ensures uniform force applied by the tabs (40).
