Abstract (en)

The cylinder (33) has an assigned device including lifting devices (57, 81) that support two elevators sequential to or from the cylinder. The elevators (17) are arranged with a simple length encompassing approximately half in a mounted condition of circumference of the cylinder. A retaining unit engages in a middle area of the elevators exhibiting the double length and connects with the lifting devices. The lifting devices lift the elevators exhibiting the double length by the retaining unit to or from the cylinder.
