Abstract (en)
[origin: EP1760217A1] The element has a sealing strip (4) made of steel plate, and a reinforcement for each plate part of a concrete building, where each reinforcement comprises several U-shaped stirrups (1, 2). The stirrups are connected with each other by a series of transversal bars (3) which are perpendicular on a plane of each stirrup. The strip is provided with a row of holes and mounted on the stirrups of one of the reinforcements via the holes, where the strip is mounted so that the strip is positioned partially in each of the plates after the application of concrete.
