Abstract (en)

[origin: EP1760221A2] The arrangement has a fixedly mountable inner console (2), an inner joint arm section (4) and a rotatable joint arrangement (3) for deviating the arm section. An arm console (6) is connected with the joint arrangement and pivotably supported at the inner console. A final control component acts vertically upon the arm console against the gravitational force in an inclined position, where the component is formed as an adjusting screw.
