Abstract (en)

[origin: EP1760234A1] The invention relates to a pivot hinge (1) with a first part (2) intended to be secured to a substantially stationary first member (20) and a second part (3) intended to be secured to a second member (30), the second hinge part being pivotable in relation to the first hinge part about a hinge axis (5). A connecting piece (4) is provided, where a first end (41) of the connecting piece is attached to the second hinge part and a second end (43) comprises means (44,45) for securing the connecting piece to the second member. The second end is arranged at a distance from the second hinge part seen in parallel with the hinge axis (5). The hinge may be used in a pivot window (10) with a sash (30) and a frame (20), where the sash may be turned in relation to the frame about the hinge axis (5). The hinge is secured to the surface of the frame member facing away from the sash member or in a recess (7) formed in an upper surface of the frame side member and the sash hinge part is connected to the sash side member via the connecting piece (4) spanning at least a part (25) of the frame member.
