Abstract (en)

The device includes a fluid-filled operating chamber (14), and a surface (2) that is subjected to load application. The load application on the surface is varied based on the volume of the operating chamber. A drive device or cylinder (12) is connected to the operating chamber for moving fluid according to variation in the volume of the operating chamber. The surface for load application forms a sealed flexible wall of the operating chamber. Independent claims are included for the following: (1) Door arrangement; and (2) Door operation method.
