Abstract (en)  
[origin: EP1760240A2] The gate actuator housing (10) includes a dish-shaped ground support body (12), and a dust cover connected to the ground support body. A plastic baseplate (14) is connected to the ground support body, and used as a plate for receiving different drive components such as motor (16), transformer (18) and transmission (20). The baseplate is formed with assembly drillings for receiving the drive components.
