Abstract (en)

[origin: FR2888277A1] The device has an electric motor (2) rotationally mounted in a tubular case (3) for controlling in rotation or in translation a driving tube (5 2), where the case is integrated with a cheek support which equips a rolling shutter. A locking unit (9) immobilizes the rotation of the electric motor in the case in its locking position and liberates the rotation of the motor in its unlocking position.
