Abstract (en)

[origin: EP1760259A2] The device has three successive immobilization hooks (62, 64, 66), and a pair of stops (30) positioned on a same side of a retention ring (20). The stops are positioned such that the stops are stopped respectively against the immobilization hooks (62, 66), and a slot (24), provided in the ring, is covered by the immobilization hook (64) when the retention ring is placed in a groove (22) defined by the hooks. An independent claim is also included for a retention ring/rotor disk assembly.
