Abstract (en)  
[origin: EP1761018A1] The present invention discloses a multimedia message system, which includes: an MMS terminal, an MMSC, a WAPGW, an SP and an MMSG. Wherein, the MMSG serves to send the multimedia messages from the SP or the MMSC, and authenticate the SP and a user in the multimedia message and a provided service. And the MMSG is connected with at least one MMSC and the SP belongs to itself respectively. The present invention also discloses a related method for sending multimedia messages, which includes: an SP submitting a service request to the home MMSG; the home MMSG of the SP that has received the service request authenticating the SP, a receiving user and the requested service, and sending the received multimedia message to the home MMSC of the receiving user. The present invention further discloses a method for the user terminal sending multimedia messages to the SP. The system and methods provided by the present invention can lower the load of the MMSC and enhance the security of the MMSC.
