Abstract (en)

[origin: EP1761107A2] The device (HG) has a printed circuit board (LP) that comprises an electronic signal processing element and a connector pad. An audio shoe (AS) that comprises a contact spring (KF) directly touching the connected pad for directly connecting the audio shoe to the circuit board. The audio shoe also comprises a battery retainer that supports the connect spring which is partially molded in to the battery retainer. An independent claim is also included for method of the hearing device.
