Abstract (en)
[origin: WO2006000917A1] A device for dispensing active compositions comprises at least one hollow porous container (1) having an active composition (3) sealed inside the container. The active composition is drawn through the pores of the hollow porous container by the action of, or example, water and/or air. The device of this invention has particular application for use as an in-bowl toilet freshener and/or air-care unit.
