Abstract (en)  
[origin: US8448414B2] A method for packaging products including the steps of delivering an initial packaging material to a package assembly line; reshaping the initial packaging material into self-supporting initial packages; packaging the products in these initial packages; delivering second packaging material to the package assembly line and packaging the initial packages, filled with the products, in the second packaging material. The initial packaging material is delivered in the form of strip stock which is converted in the package assembly line into individual package blanks; and reshaped into the initial packages. This makes packaging possible in the shortest possible time, with nevertheless high flexibility.
