Abstract (en)
[origin: WO2005124086A1] The invention relates to a carousel door comprising outer, fixed drum walls provided with two passages, and a rotating device arranged inside the surrounding drum walls and comprising at least two rotating door leaves. The aim of the invention is to create an improved carousel door which offers a more effective protection against jamming, with less material requirements. To this end, a deformable wall (3) is provided between the door leaf (2) and the drum wall (1).
