Abstract (en)

[origin: WO2006000654A1] The inventive method for forming a label (100) containing a chip (23) which is applied to a film (11) and supplied on a support (20) on which a label is formed by applying the support on the film surface and by printing first label-individualising information (15), wherein said invention is characterised in that said support and surface form a part of the label where the first printed information is readable. Said method is particularly adaptable for forming a luggage label provided with a radiofrequency chip.
