Abstract (en)

[origin: WO2006006057A1] The inventive driven roller shutter (1) comprises a motor (8) for driving the winding tube (7) of a shutter (14) through a gear (10). The motor (8) and the gear (10) are fixed by means of a connection clamped in a cylindrical housing (13). The inventive device is characterised in that the housing (13) comprises at least one cylindrical element made of a composite material.
