Abstract (en)
A device in shelf stands with several shelves (3) with sloping storage trays (4) which are extendable on a holder arm (5) in order to facilitate replenishing and removing goods stored in the trays. The trays (4) are secured in the retracted position by means of a locking device which is operated from the front side of the trays. The locking device comprises a leaf-shaped locking hook (9,15) which when the tray is extended moves in a channel (10,16) arranged in the upper or under side of the tray. At the end facing the back side of the tray the locking hook is connected to a pivot (13,13a) in the holder (5) and at the other end, when the tray (4) is retracted to its position of application extends from the channel (10,16) with a hook-shaped part (14,19) which is arranged to cooperate with a locking plate (12,18) on the front edge of the tray which engages the hook-shaped part (14,19) of the locking hook (9,15).
