Abstract (en)

[origin: EP1762384A2] The method involves over-carrying inkjet and/or laser printer units in an extension (3) of a sheet material in a support level above the inkjet and/or laser printer units. The units are provided at a lower side with individual marking of the sheet material according to a printing and/or painting process. A splasher and/or particulate material resulting from the inkjet and/or laser printer units is absorbed above the support level of the sheet material. The sheet material is non-positively supported to a part below the support level. An independent claim is also included for a device for marking a sheet material in a processing machine.
