Abstract (en)

[origin: EP1762385A2] The print web merging device merges several webs (5, 6, 7, 8, 9, 10) to form a multilaminar string (4). Passing it through the outlet from the roller set (11), in the region of which there is a string guide running crosswise to the linear guide and the running direction of the string prevents pockets of air becoming enclosed between the paper webs.
