Abstract (en)

[origin: EP1762454A1] The device has a locking unit with a fastening plate (107) that is designed with a locking head (119) and a squared through hole. The head engages with side nuts in notches of a slide chair plate (2) and bends downwards at its end. The hole receives a screw nut of a T-threaded bolt (10) in a twisting-proof manner. The bolt is locked with its T-bolt head in the notches. The locking head is formed with a contour, which is tapered either from its left end or right end inwards or downwards to a slide plate (1), at its outer side.
