Abstract (en)
[origin: EP1762529A2] The device has a machine frame with only a side wall (7), and rollers (5) of tractive assembly (4) accommodated on a supporting frame (10) having two front plates (11, 12). A front plate (11) is designed as stationary front plate and is fixable at an associated unit of the side wall. The other plate (12) is demountable from the frame (10). Two bearings (21, 21a, 22, 22a) are spaced apart from each in an axial direction and are associated to the rollers in area of the stationary front plate. Bearings (23, 23a) are associated to the rollers in area of the demountable plate. The front plates accommodate the rollers and are connected with each other by a traverse (13).
